

“Wednesday Evening With A Master Gardener” Series

Welcome to this new series of presentations on residential horticulture for the gardening public. We will deliver topics of interest that are trending in Orange County plus breaking information on new garden pests.

This series will be monthly on the third Wednesday of the month at 6:30 PM via the ZOOM platform.

**COMING LECTURE:
April 20, 2022, 6:30-7:30 PM**

What We Need-Bees and More

Birds and the bees – from the gardener’s point of view – or pollination, the loving interplay between pollinators and flowers, keeps the ecosystem in balance. Listen as we weave the story of the importance, evolution, and methods of pollination, then introduce you to the main characters: honeybees, wasps, butterflies, moths and hummingbirds. Learn about bee nesting habits, host and nectar plants, and causes of the decline in bee population. And some tips on attracting and saving pollinators.

Free, Online Zoom Class - [Registration Required](#)
