

CHANNEL ISLAND FLORA

Zoom Encore Presentation

FRIDAY, AUGUST 4, 10-11:00 AM

Zoom link will be emailed to those registered prior to presentation

California's Channel Islands are home to nearly 800 different plant types, more than 280 of which are found nowhere else.

Many of these developed in isolation from the mainland, over terrain ranging from woodlands and grasslands to chaparral and coastal sage scrub. Fourteen of the islands' plants are federally listed as threatened or endangered species.

Join us to get acquainted with some interesting and rare plants found on our own Channel Islands.

Free, open to the public

Note: This is an encore presentation of an earlier in-person Mission Viejo Murray Center class. Use the link below to register. The Zoom link will be emailed prior to the class.

Sorry, the zoom will not be recorded.

Registration Required
